

Farmweld Breeding Gating.

Durable. Productive. Versatile.

Farmweld's Breeding Gating, made of high-quality, durable materials, has uniform heavy welds that stand up to the rigors of sows and boars. This gating system is designed for easy installation and offers flexibility to meet your operation's changing needs. Farmweld also offers a range of complementary gestation and breeding products.

high quality, reliable, durable

Durable, high-quality materials result in uniform heavy welds that ensure longevity of the gating as well as enhance the safety of workers and pigs alike. The gating weighs 13 pounds per foot (5.9 kg per 305 mm).

Vertical rods keep pigs from climbing. Gates can be turned upside down to give twice the life.

Posts provide extra durability. Posts are placed at the gating intersections to add stability and strength to the overall gating system.

Gates are sized to fit your buildings. All gates are made according to your need and to fit each individual barn. That means there is no cutting or welding required on-site.

Gating is designed with durability in mind for breeding stock – tall and rugged to withstand abuse. The breeding gating's overall height is 39" (991 mm) with 1" (25.4 mm) solid horizontal top and bottom rods and 1/2" (13 mm) solid inner rods on 4 1/4" (108 mm) centers.

On-site installation is quick and easy. The gating comes with all the hardware needed for complete installation on site. The standard package includes posts with 1/2" (13 mm) x 5" (127 mm) x 14" (356 mm) steel base plates.

Detailed floor plans are provided for most gating orders. Breeding gating is available in up to 10' (3.05 m) lengths.

Additional Breeding Equipment

Farmweld offers a full package of breeding equipment including Gestation Stalls and Gestation Stanchions.

Farmweld Gestation Stalls combine user-friendly design, top-grade materials and world-class workmanship to provide value, performance and reliability that will stand up to the rigors of housing sows year after year.

Low-back design provides workers access to the animal; swing gates in both the front and rear make it easy to move sows in and out of the stall, and non-removable pull-pins ensure pins won't get in the way or lost.

Farmweld Gestation Stanchions offer an open-pen gestation solution that protects each sow through the shoulder, ensuring less dominant-sow interruptions at feeding time – available in various sizes.

Gating is built to order. Contact us for more information on the Breeding Gating or any of our other products including Nursery and Wean-to-Finish Gating.
