

# Farmweld Flooring System.™

**Durable. Productive. Versatile.**

*"I've never replaced a feeder or a single piece of flooring, and I can't see any wear – anywhere."*

*– Matt Kneller,  
who purchased the facilities from his dad in 2005*

Keeping your pigs comfortable and clean is the primary objective of all Farmweld sow and pig flooring products. It starts with our sow platforms and nursery flooring systems, made of state-of-the-art polypropylene to ensure long-term durability. The material also provides for easy and thorough cleaning to help keep pigs healthy and growing.

The larger panel size makes the Farmweld Flooring System the standard of excellence for pigs when used with the farrowing platforms and nursery flooring. Designed for seamless integration, the Farmweld Warming Panel™ reduces drafts and keeps newborn piglets warm and comfortable.

*comfort, clean, flexible*

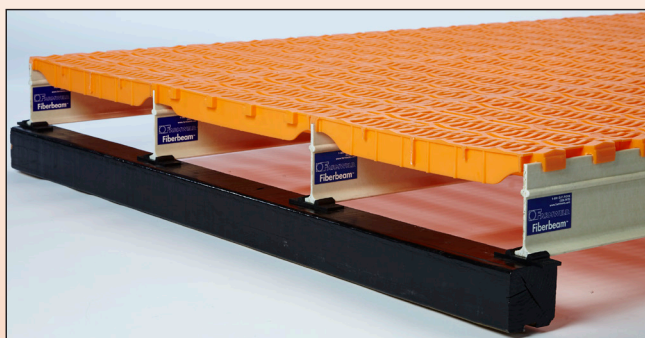

# FARMWELD FLOORING SYSTEM

**Superior quality material promotes animal comfort and health.** The Farmweld Flooring System panels are molded from high quality, state-of-the-art polypropylene. This provides a warm, comfortable surface for baby or nursery pigs to eat and rest, promoting efficient growth.

**The textured surface creates excellent traction to keep pigs safe** as they move about. The bright orange, non-porous plastic promotes rapid transfer of waste into the pit and is easy to clean, which enhances biosecurity efforts.

**Flooring panels offer flexible sizing, easy installation and minimum waste.** Flooring panels can be cut every 4" (102 mm) in width, so fitting is easy and waste is kept to a minimum. Standard panel sizes are 18" x 24" (457 mm x 610 mm) and 24" x 24" (610 mm x 610 mm).

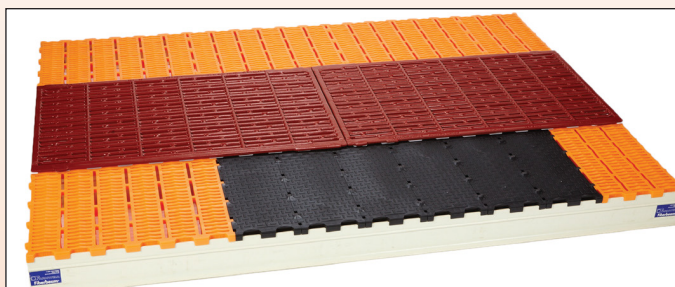

**Fiberbeams™ feature a solid fiberglass design** that provides stronger, more stable and durable flooring supports. The solid filled construction leaves no gaps for rodents to infest. Unique stabilizer corners provide a full inch of vertical beam support - twice the depth of other panels. This means the support beam won't tip over; your floor is more stable and durable.

**Fiberbeams come in a range of sizes.** To best meet the specific needs of your buildings, Farmweld offers a range of different beam sizes, with standard sizes of 1/4" x 3" (6 mm x 76 mm) and 1/4" x 5" (6 mm x 127 mm). For added durability, fiberglass beam clips protect the fiberglass beam from wear and tear.

**Farrowing house platforms and nursery flooring:** Our Modular Cast Center Farrowing House Platforms and Nursery Flooring are designed as an integrated system to work with other Farmweld flooring and farrowing products. This durable platform will last for years - saving material, installation and downtime costs of replacements.

**The Farmweld Warming Panel™ integrates seamlessly** with Farmweld's Farrowing Crate Flooring System. The Warming Panel reduces drafts around newborn pigs, while the textured surface provides improved stability. Interlocking design and size allows flexibility in determining coverage area. The Warming Panel also can be used in nursery areas as a warming center.
